

User Guide

"Main Config" tab:

- Enter an order date from which the tracked parcels will be checked
- By default, the orders to be processed are those "Out for Delivery" and will be made "Delivered"

"Carrier Config" tab :

You will find a list of pre-set 'carriers configurations' (not to be confused with your PrestaShop carriers)

- For those you need, you must link the corresponding carriers, for example if you have 3 Coliposte carriers (colissimo home, relay point, post office), you must add them using the 'Edit' bouton and then select them one by one; then click 'add' button then click 'Save' bouton

You can also :

Enable / disable a 'carrier configuration' so that related orders is not analyzed

- Add / Delete expressions relating to the effective delivery of the parcel, if certain terms are not present in our preset or if the carrier changes these expressions

- Change The name of the 'carrier configuration'

- Change The carrier's tracking URL

Parcel tracking analysis

You have 4 ways to analyze your orders:

1. Pressing the icon 'Play' located on each 'carrier configuration' row
2. Pressing the button 'Update status' which will launch analysis for all active 'carrier configurations'
3. Pressing the submenu 'Update status !' located in the 'Orders' menu of your Back Office main menu.
4. Including The URL present in the 'Cron Task' tab in your cron task manager, or via your browser's address bar.
