

<http://www.johanncorbelconsulting.fr>

Keep in mind that those codes won't be « real » EAN code (that have to be bought throught authorized companies), but codes gerenated from your IDs products.

But if you need « real » codes, you'll have to ask an authorized dealer for.

Settings :

- Code prefix : enter your code prefix if you have one
- EAN code : YES / NO : to set if the module have to generate an EAN code after a new product creation or not
- UPC code: YES / NO : to set if the module have to generate an UPC code after a new product creation or not

EAN and UPC generated codes are valid : their last control digit is OK.

Generate missing codes :

When you click on this button, the module will generate all missing EAN and / or UPC codes for your products and their attributes if needed.

Existing codes won't be overwritten.

Missing EAN code will be generated only if the « EAN code » parameter is set to « YES » in « Settings »

Missing UPC code will be generated only if the « UPC code » parameter is set to « YES » in « Settings »

Delete existing codes :

When you click on this button, the module will delete existing EAN / UPC codes if their option is set to « YES » in « Settings ».

If « Delete codes » is set to « YES », only invalid codes will be deleted (correct codes will be kept).
