Installation

1. Log into backoffice and open Module manager
2. Click on Upload a module
3. Select ezaddress.zip
4. Click on Configuration and proceed with Setup

Configuration

Setup

These are the basic options to get the module working, you can choose from 3 different services to use for address autocomplete: Google, Geoapify and In-ADS.

Google

Searches from all addresses around the world and displays an error when selected address is from a country that is not enabled in the shop.

New address

Alias		Optional
First name	Demo	
Last name	Account	
Company		Optional
Address	117 Rue Saint-Lazare	
Address Complement	117 Rue Saint-Lazare Paris, France 117 Rue Saint-Lazare Apt, France 117 Rue Saint-Lazare Béthisy-Saint-Martin, France Rue de Saint-Lazare 117 Mons, Belgium 117 Rue Saint-Lazare La Farliède, France powered by Google	Optional
Zip/Postal Code		
City		
Country	France	
Phone		Optional

SAVE

Autocomplete results are filtered based on enabled countries.
Dropdown uses the same styling as your theme.

Options

Autocomplete input placeholder

Placeholder text for autocomplete input.

Auto hide fields ☒ Yes

Simplifies address form by hiding unnecessary fields.

7.1. Select Google from Autocomplete API dropdown

7.2. Paste API key to Google API key input

7.3. Click Save

Options

Here are different options that you can customize for your specific needs.

Autocomplete input placeholder

This is the placeholder text that is displayed on the autocomplete input when the input is empty.

Address

Search for an address...

Auto hide fields

This method simplifies address form by hiding unnecessary fields, which are autofilled based on autocomplete result. When enabled, the address fields are shown after user enters at least 3 characters, in case anything goes wrong or autocomplete doesn't return any results the address fields can still be filled in manually.

Address

Search for an address...

Phone

Optional

SAVE

Address in site language

When enabled, the addresses are returned in the user selected site language, works with Google and Geoapify.

When enabled and using Geoapify the state autofill might not work correctly for all countries, so please test for your specific use case.

Google Autocomplete settings

Specific settings for Google Autocomplete only.

Google error message

Error message to display when user selects an address from a country that is not enabled.
