

MODULE MANUAL

Module name: Combine Guests to a Customer

For: Prestashop version 1.5.x & 1.6.x & 1.7.x

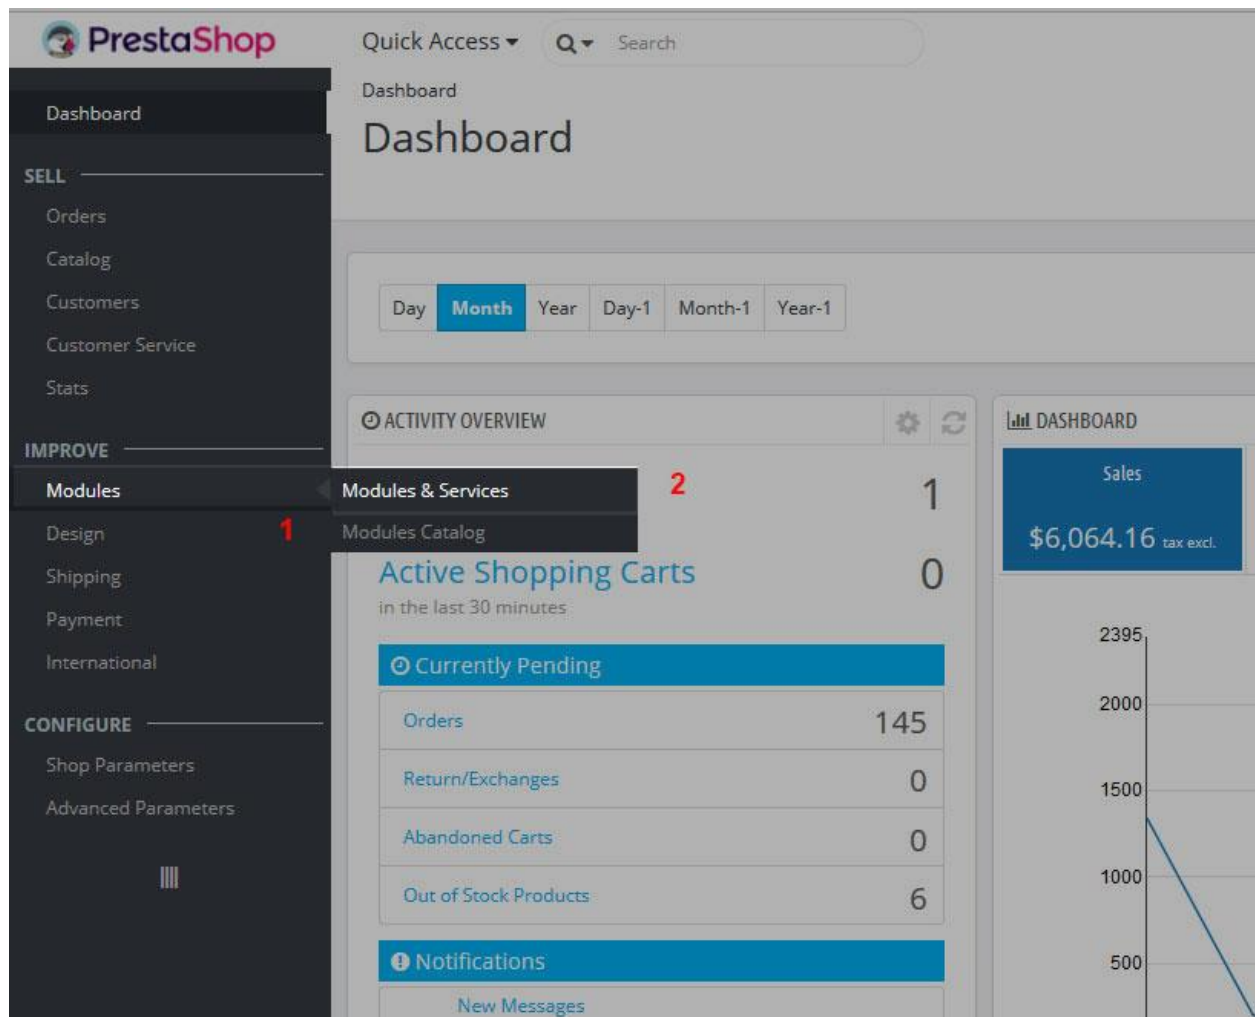

Table of Contents

1	Install module	1
2	Module configuration	3
3	How to setup cron job in cPanel.....	6

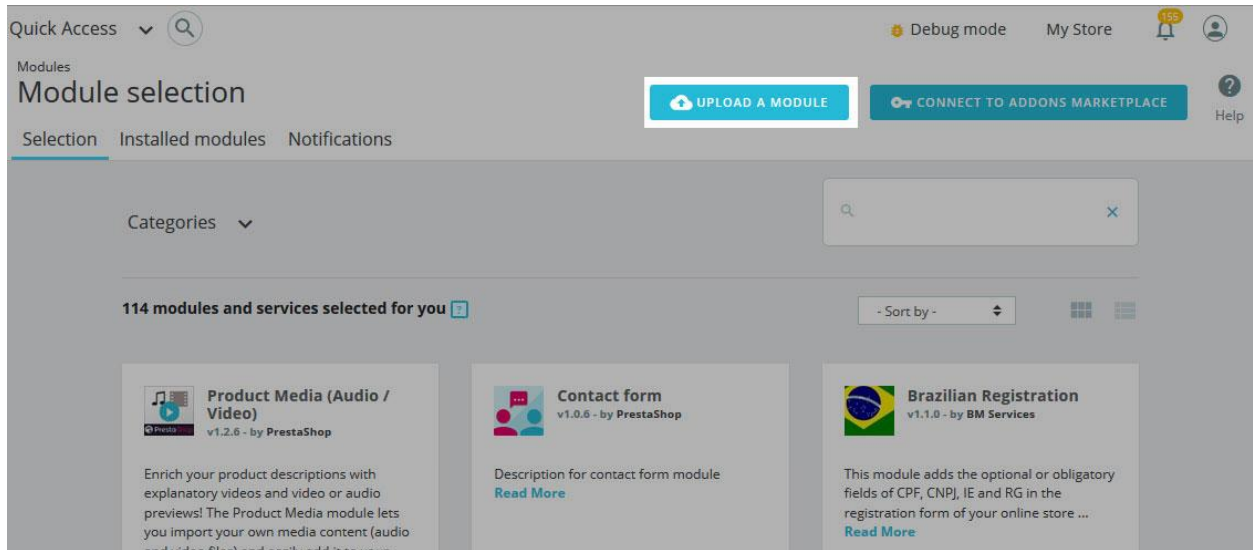

The idea of module “**Combine guests to customer**” is creating a module which allows administrator to combine several guest accounts which share the same email address into one registered account for easy management. An email notification will be sent to administrator when combine process is done. Administrator can also choose whether sending an alert email to customer or not.

1 Install module

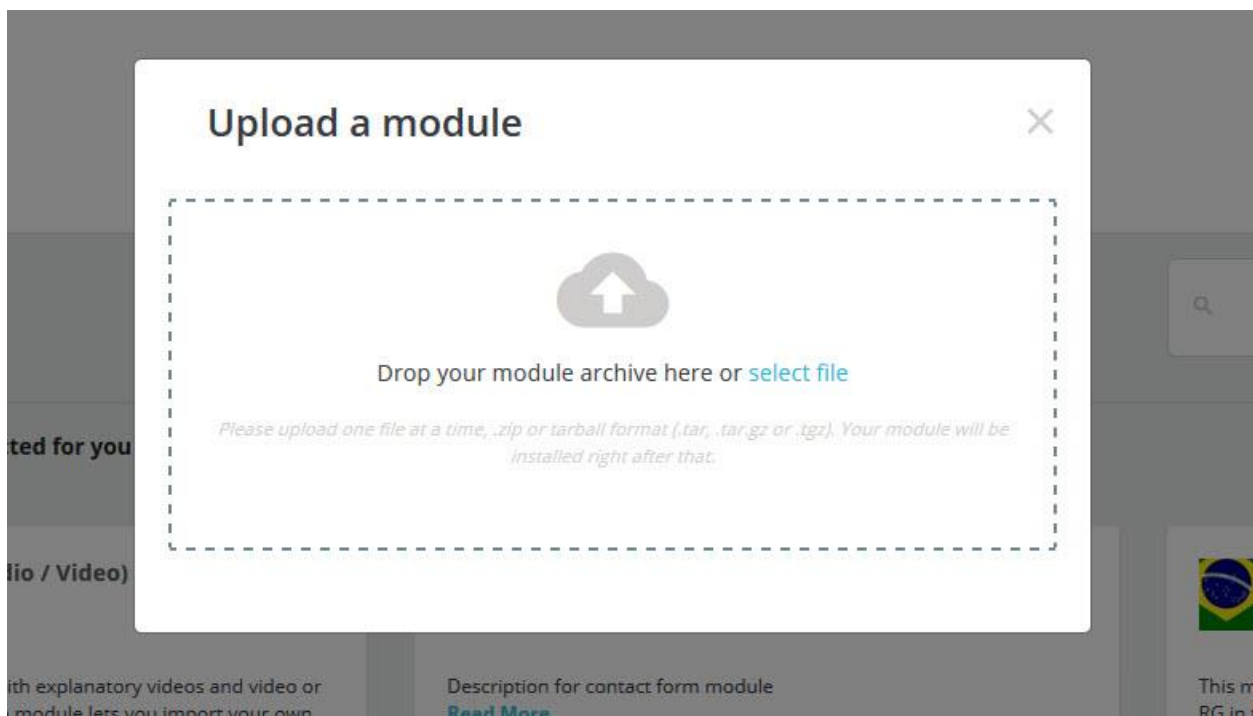

- In the Back Office, go to Modules

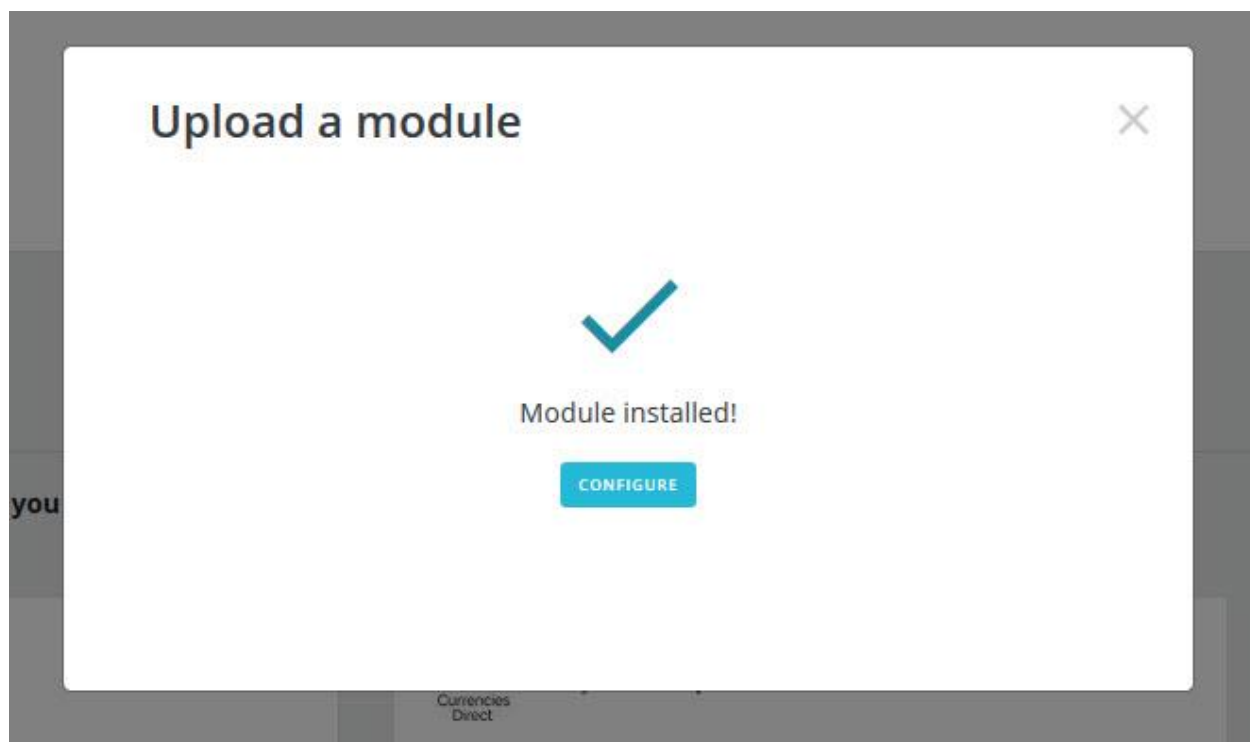

- Click on **Add new modules** in the upper the right-hand side

- In Add new module page, click “**Browse**” button and locate the “**hscombineguests.zip**” file in the download package from us.

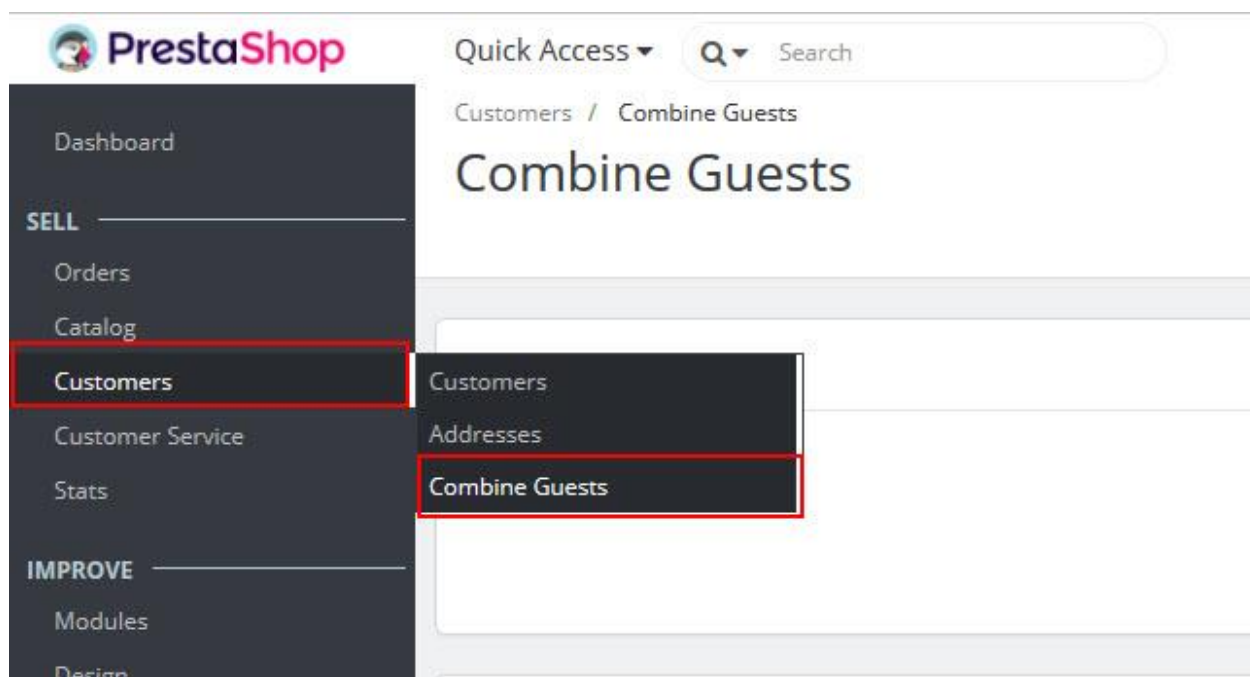

- Click on “**Upload this module**” button.
- In the “**Modules**” tab, search for “**Combine guests to a customer**” to locate to the module. Click “**Install**”

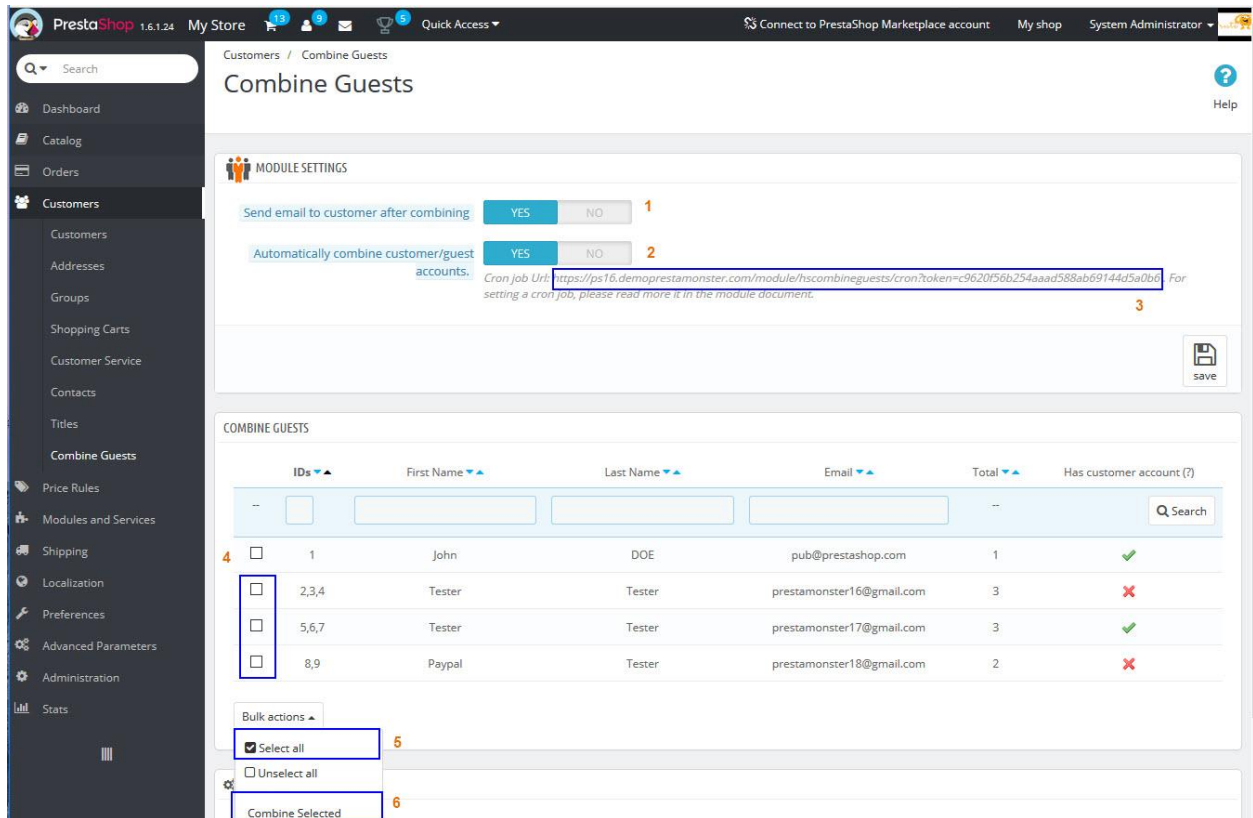

2 Module configuration

Please go to **BO > modules > Combine guests > configure** or just simply go to **BO > Customers > Combine guests**

You will see a page like below

In which:

1. **Send email to customer after combining:** check if you want to send a notification email to customer when the combine process is done or not.
2. **Automatically combine customer/guest accounts:** If this option is Yes and you setup a cron job on your hosting, the customer/guest account will be combined automatically.
3. **This is cron job url.**
4. **Select single guest:** Check to any checkbox for a guest email to combine into customer account.
5. **Select all:** Check to this option if you want to select all guest emails to combine into customer account.
6. **Combine button:** Click to this button after choosing guest account to start combine process.

For example, in our shop, there are several guest accounts for a single email address like below

3 How to setup cron job in cPanel.

Step 1: Login your cPanel

Step 2: Click Cron jobs.

Step 3: Add new cron job

1. Select a common setting.

A screenshot of the 'Add New Cron Job' form. The form has a title 'Add New Cron Job' and a subtitle 'PHP command examples:'. Below the subtitle, there are two examples of PHP commands: a 'General example' and a 'Domain-specific example'. The 'Common Settings' dropdown menu is open, showing a list of cron job schedules. The 'Once Per Day(0 0 * * *)' option is selected and highlighted in blue. Below the dropdown menu, there are fields for 'Weekday:' and 'Command:'. The 'Weekday:' field has a dropdown menu with the same 'Common Settings' options. The 'Command:' field is a text input box. At the bottom of the form, there is a blue button labeled 'Add New Cron Job'.

2. Copy cron job url from module setting

3. Add cron job url: `wget 'cron_job_url'`

EX:

`wget 'https://your_domain.com/module/hscombineguests/cron?token=c9620f56b254aaad588ab69144d5a0b6'`

4. Click button: Add new cron job

After completed:
