Sips Worldline Module

The Sips Worldline module is a remote payment solution that guarantees a high level of security and lets merchants take advantage of all its functionalities on their remote selling channels.

Sips is the international, multichannel secure payment solution provided by Worldline, the leader in e-payment transactional services in France and throughout Europe.

With a single integration, this module gives you access to functionalities like:

- Accepting multiple payment methods with one module
- Localizing your payment page with multiple languages and currencies
- Completing transactions when orders are confirmed
- Splitting payments into (up to 4) installments, without added fees
- 3D Secured payments (set by order total)

Allow customers from your online store to check out with the following payment methods:

VISA
MASTERCARD
VISA ELECTRON
MAESTRO
PAYPAL
ACCEPTGIRO
BCMC
BANK CARD
IDEAL
INCASSO
MINITIX
NETBANKING
REFUND
SDD
SOFORT
VPAY

I. INSTALLATION

Did you select Installation "By PrestaShop" at checkout?

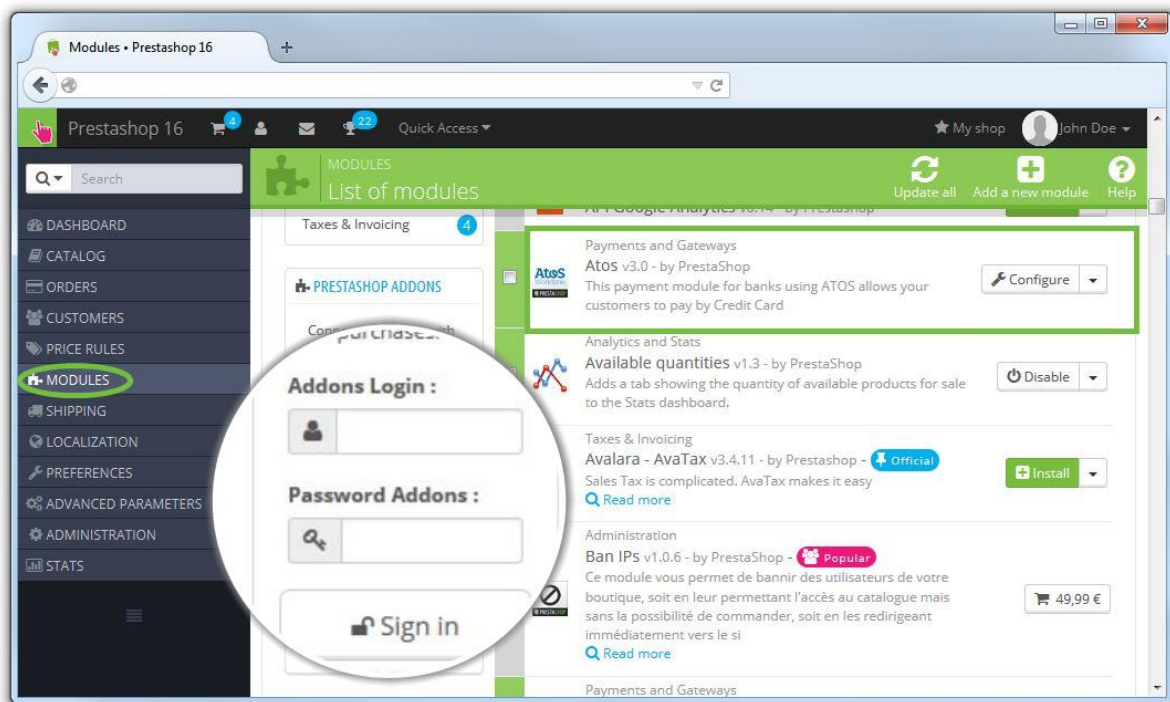

If so, you will receive an e-mail requesting additional information that grants our experts access to your store for module installation and configuration. This includes:

- Uploading and installing the module on your shop
- Configuring the module in your back office
- Configuring your bank administration panel (if needed)
- Testing payments
- Instant analysis of all problems found
- Other support offered in this module

If not, follow the installation instructions listed below for your version of PrestaShop.

Are you running **PrestaShop 1.6**?

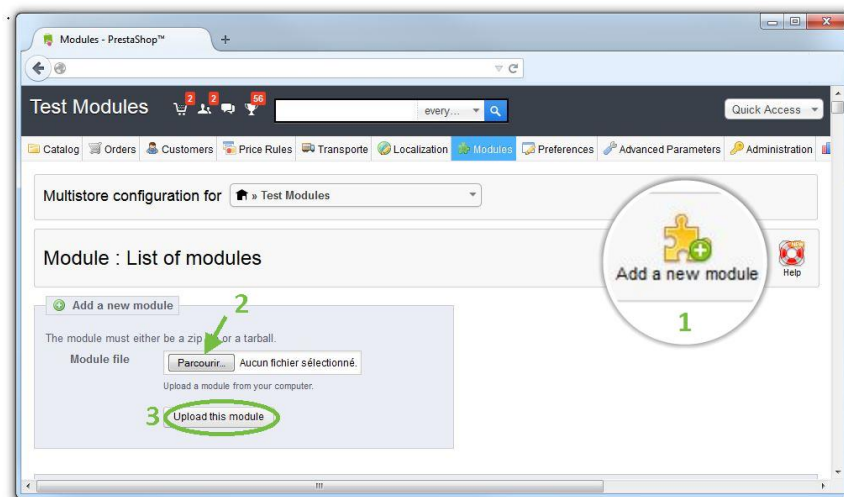

1. From your store's back office menu, click the "Modules" tab.

2. In the Log in block, enter your PrestaShop Addons username and password then click "Connect". (All PrestaShop Addons orders will now automatically appear in the back office.)
3. Search and locate the "Sips Worldline" module, then click "Install". Once installed, the "Configure" button will be displayed.

Are you running **PrestaShop 1.5**?

1. From the "Modules" tab of your PrestaShop Back Office, click "Add new module" located at the top right corner of your page.

2. Select the “Sips Worldline.zip” file you downloaded from PrestaShop Addons.
3. Click “Upload this module”.
4. The module now appears in your modules list. You can also access it, from the “Modules” tab, under “Payment”.
5. Click “Install”, select “Configure” from the drop down menu, and click “Submit”.

The following 3 tabs now appear: Documents, Setup and Contact.

II. DOCUMENTS TAB

Use this tab to access this module’s documents for information or help with configuring this module.

III. SETUP TAB

The Setup tab lets you to fill in credentials associated with your Worldline bank account.

To make use of all the functionalities provided through the Sips Worldline module, you need to have a remote selling agreement with your bank. Worldline will provide you with all the credentials needed (Merchant ID, Version Key and Password) to configure your module.

- **Operation Modes:** The module has a **Test** mode and a **Production** mode.

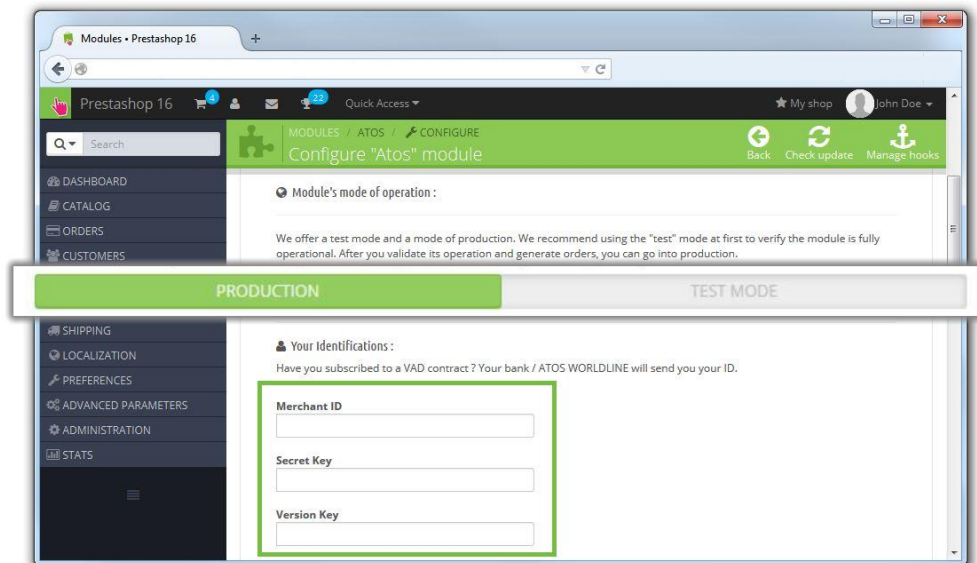

In **Test** mode, payments will NOT be sent to the bank. We highly recommend you use the Test mode to place test orders. This ensures the module is properly installed and configured.

By default, this module includes sample credentials that allows you to explore its functions. When you are in test mode, you don’t need to fill in the credentials.

After testing the module, you must enter the credentials from Worldline *before* moving into production mode. The following information must be entered:

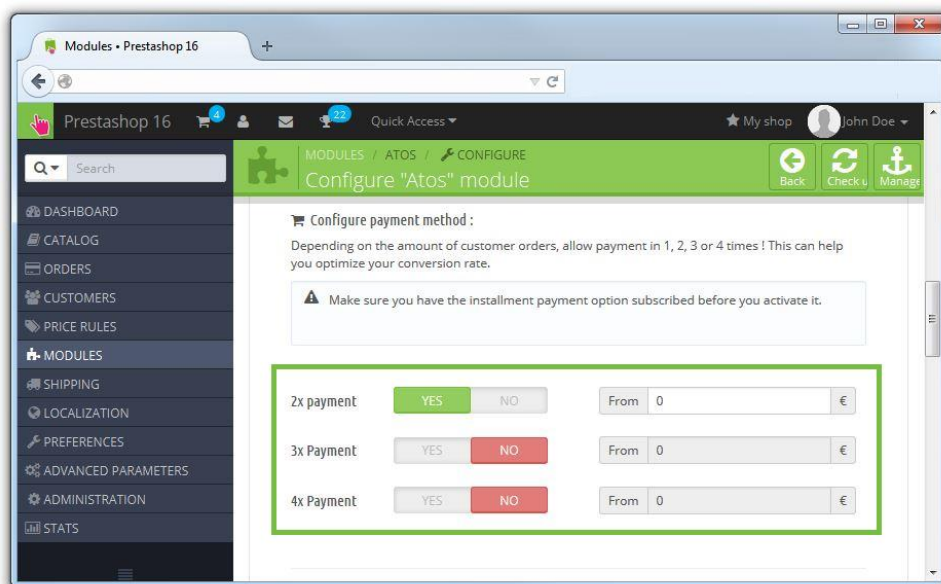

- Merchant ID: unique identifier used by Worldline
- Password: unique value ensuring the security of Internet payments
- Version Key:

Once you're ready, switch from Test mode to Production mode.

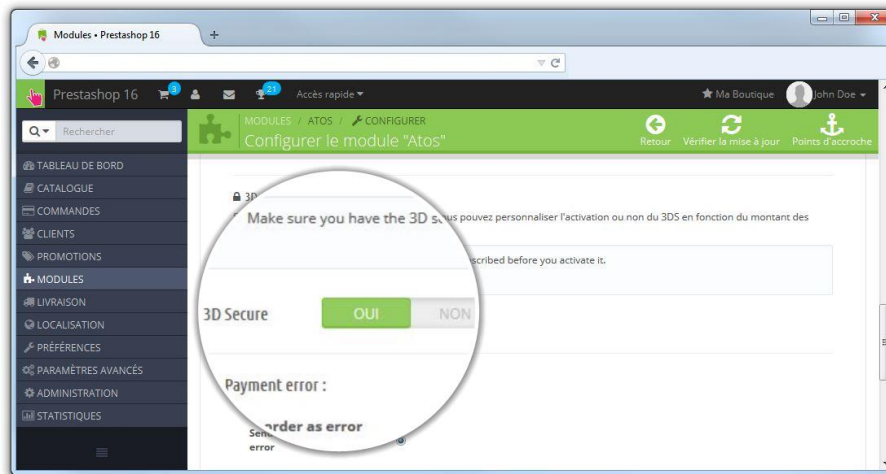

- **Installment Payment Method:** This feature lets you offer customers the option of paying in installments of 2, 3 or 4 based upon the order total *minimum*. By default, this field is empty and payment installments are offered at any amount.

Limit the number of payment installments by selecting "No" by each installment.

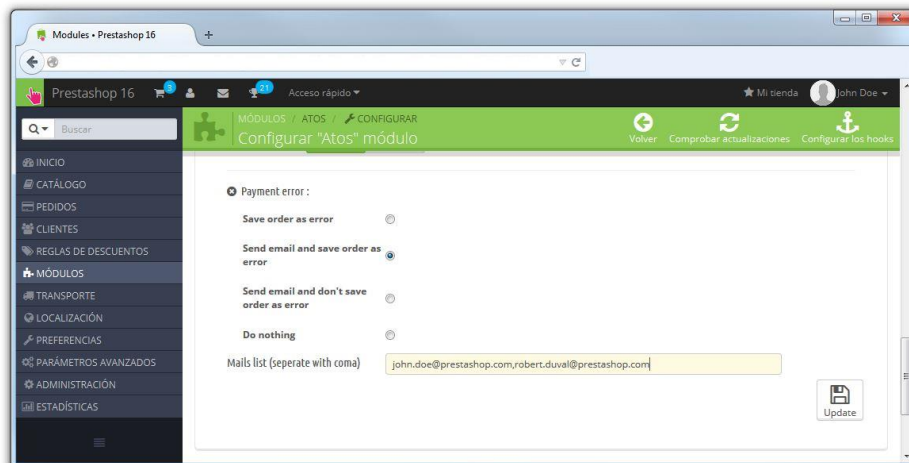

- **3 Domain Secure (3D Secure):** Ensure safe credit card payments with Visa and MasterCard's technical standard (3D Secure). For commercial reasons, Visa and MasterCard use different brands: Verified by Visa and MasterCard SecureCode.

Activate this option to only apply 3D Secure to orders with a minimum total, depending on your remote selling agreement with your bank. By default, 3D Secure identification will be requested for all payments.

- **Payment Error:** When a transaction is rejected, you can choose to be notified and save the order with a status assigned. This module can:
 - Send you an e-mail and save the order with status “payment error”
 - Send you an e-mail only
 - Save the order with status “payment error” only
 - Do nothing

You can also specify the e-mail address to the send notifications to.

IV. CONTACT TAB
